Series 71 *Unique PCB mounting system.*

https://eao.com/71

71 Information about the Series

Key advantages

- Unique PCB mounting
- A variety of switching functions
- Modular design and flush mounting
- IP65 front protection

Typical application areas

- Machinery and control systems
- · Control cabinet engineering
- Special vehicles
- Conveyor systems
- Process automation
- Plus many other applications

Functions

- Pushbutton
- Illuminated pushbutton
- Mushroom-head pushbutton
- Selector switch
- Keylock switch
- Indicator

Design

Flush

IP front protection

■ IP65

Raitings

- 250 VAC (3 A)

Mounting cut-outs

- Ø 22.3 mm
- Square
- Rectangular
- PCB

816

Terminal

PCB

Lens Material

- Aluminium
- Plastic

Markings

- Engraving
- Laser marking
- Hot stamping
- Film insert / marking plate
- Screen print

Conformities

- CE
- 2011/65/EU (RoHS)

Pushbutton round, IP65

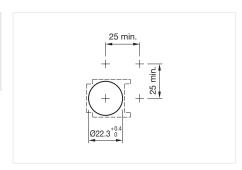

Product can differ from the current configuration.

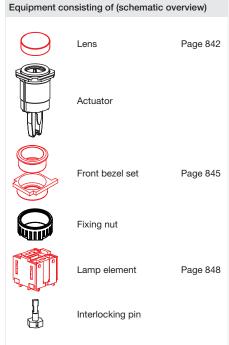

Dimensions [mm]

General information

- Pitch of the front plate mounting holes must agree with the printed circuit board holes Ø 3.5 mm
- For front dimension Ø 25 mm

Mounting cut-outs [mm]

Each Part Number listed below includes all the black components shown in the 3D-drawing.

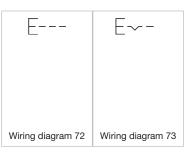

To obtain a complete unit, please select the red components from the pages shown.

Additional information

- Due to high surface temperatures, the series resistor must not be soldered directly to the terminals of the equipment (use a terminal plate)
- When using AC/DC types with AC operation, slight flickering can occur
- The luminous intensity stated is for when used with DC
- Electrical and optical data are measured at 25 °C
- The specified versions are built with a protection diode (halve wave rectifier) in series and the LED
- Luminosity and wave length variations caused by LED manufacturing processes may cause slight differences regarding the illumination. The customer has to decide what resistor shall be used to the LED
- Where supply voltages are over 48 V, a voltage-reduction element (external protective series resistor)
 must be used.
- Keep to the country specific safety instructions

General notes

1. Engraving

In addition to the most commonly used world languages, in DIN1451-3 close spacing, other typefaces are available as Scandinavian, Slavic, Greek, Russian and Polish. Red, blue and black lenses are filled with white colour. Other colour lenses are filled in black. Standard height of letters is 2 mm. If the height is not specified, we will supply 2 mm engraved letters.

2. Hot stamping

For larger series it is worth considering markings by means of hot stamping. We will pleased to advise you.

3. Film inserts

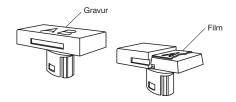

Instead of using engraving the lenses can be fitted with transparent film inserts, as an alternative. In the case of use of a smoke-black lens the fitted film becomes readable only if the lamp is on. The film thickness is 0.2 mm. For lenses \emptyset 24 mm and \emptyset 25 mm with Part No. 619642.x the marking takes place directly on the text plate Part No. 61-9707.7, instead of a film insert.

Important: Consider pushbutton mounting orientation befor specifying engraving characters!

71 Application guidelines

Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilo-

volts in amplitude even when nominal circuit voltages are low (e.g. 12 VDC) see Fig. 2.

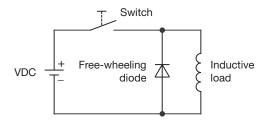

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

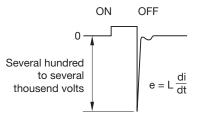

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load Fig. 1
