### Multichannel, Isolated, Precision ADC

#### **General Description**

The MAX78700 is an isolated analog-to-digital converter (ADC) for use with a compatible MAX78xxx energy measurement processor. The device provides current and voltage measurements to the host while the host provides control, command, and power to the MAX78700. A pulse transformer provides the isolated data and power path between the device and host, eliminating the need for additional isolation components in the measurement subsystem.

#### **Applications**

- Smart Grid-Friendly Equipment
- Lighting Control Systems
- Commercial and Industrial Automation
- Renewable Energy Systems
- Electric Vehicle Charging Systems

#### **Benefits and Features**

- Better Than 0.5% Watt-Hour Accuracy Over Wide Dynamic Range Using a Single Calibration Point
  - High-Resolution Delta-Sigma ADC
  - Factory-Trimmed Voltage Reference and Die Temperature Sensor
- Simplified System Architecture
  - No Power Supply Required
  - Fully Powered by the Host with the Isolation Transformer
  - · Eliminates Data Isolation Components
- · Reduced Form Factor and Bill of Materials
- Small 10-Pin µMAX® Package

#### **Absolute Maximum Ratings**

(All voltages with respect to GND.)	Operating Junction Temperature (Peak, 100ms)+140°C
Voltage Range INAN, INAP, INBP, INBN0.5V to +4.6V	Operating Junction Temperature (Continuous)+125°C
Voltage Range ISOP, ISON0.5V to +4.6V	Storage Temperature45°C to +165°C
Operating Temperature Range40°C to +85°C	Lead Temperature (soldering, 10s)+300°C
Operating Junction Temperature (Peak)+140°C	Soldering Temperature (reflow)+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

#### **Recommended External Components**

NAME	FROM	то	FUNCTION	VALUE	UNIT
C1	V <sub>CC</sub>	GND	Bypass capacitor for supply	0.5	μF

#### **Performance Specifications**

(Limits are 100% production tested at  $T_A = +22^{\circ}$ C. Limits over the operating temperature range and relevant supply voltage range are guaranteed by design and characterization.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Usable Input Range	V <sub>IN</sub>	INAP, INAN, INBP, INBN	V <sub>CC</sub> - 250		V <sub>CC</sub> + 250	mV peak
Total Harmonic Distortion	THD	First 10 harmonics, f <sub>IN</sub> = 65Hz, V <sub>IN</sub> = 20mV, 64kpts FFT, Blackman-Harris window		-85		dB
Input Impedance		f <sub>IN</sub> = 65Hz	20		90	kΩ
Temperature Coefficient of Input Impedance		f <sub>IN</sub> = 65Hz (Note 1)		1.7		Ω/°C
ADC Gain Error vs. % Power-Supply Variation		$\frac{10^{6} \Delta \text{Nout}_{\text{PK}} 357 \text{nV} / \text{V}_{\text{IN}}}{100 \Delta \text{VCC} / 3.3}$ $\text{V}_{\text{IN}} = 200 \text{mV}_{\text{P-P}}, 65 \text{Hz},$ $\text{V}_{\text{CC}} = 3.0 \text{V}, 3.6 \text{V}$		50		ppm/%
Input Offset			-10		+10	mV

Note 1: Guaranteed by design, not subject to test.

# Multichannel, Isolated, Precision ADC

# **Pin Configuration**

### **Pin Description**

PIN	NAME	FUNCTION
1	INBN	Channel B ADC Negative Input
2	INBP	Channel B ADC Positive Input
3	TESTENB	Enables the Test Modes. Must be grounded in normal operation.
4	ISON	Transformer Negative
5	ISOP	Transformer Positive
6	TMUX	Host-Controlled DIO
7	V <sub>CC</sub>	Output of the Rectifier Block
8	GND	Ground. The $0.5\mu$ F capacitor from V <sub>CC</sub> to GND must be connected to this pin.
9	INAP	Channel AADC Positive Input
10	INAN	Channel A ADC Negative Input

#### **Detailed Description**

The MAX78700 is an isolated current and voltage analog-to-digital converter (ADC) that is compatible with MAX78xxx hosts. The device digitizes low-level signals from shunt resistor type current sensors and resistive divider voltage measurements.

The device continuously sends ADC data to the host. The host can request the device to return certain ancillary data such as trim information and die temperature data. The MAX78700 communicates with the host through a pulse transformer to provide isolation from the high-voltage power domain.

Figure 1 shows a block diagram of the device with a brief description of various functional blocks.

#### Rectifier

The active rectifier in the device rectifies the power pulses received from the host through the isolation transformer to create the V<sub>CC</sub> voltage. A 2.5V regulator block powers all the digital blocks of the chip except the PLL and ISO\_INT, which are powered by V<sub>CC</sub>.

#### ISO\_INT

The isolated interface block receives the incoming data from the host and transmits data back to the host through the isolation transformer.

#### PLL

The PLL locks to the incoming power pulses to create reference clocks for the ADC and communications interface to the host.

#### ADC

Maxim Integrated's proven delta-sigma ADC digitizes the voltage and current-sense voltages.

#### Bandgap

The device includes an on-chip precision bandgap voltage reference that incorporates auto-zero techniques as well as production trims to minimize errors caused by component mismatch and drift. The result is a voltage output with a predictable temperature coefficient that is compensated in firmware by the host.

Figure 1. Functional Diagram

### Multichannel, Isolated, Precision ADC

# Temperature and Power-Supply Voltage Measurement

The device includes an on-chip temperature sensor. The voltage from this sensor is measured by the ADC and sent to the host. During manufacturing test, the circuit is calibrated by measuring the voltage at room temperature and storing the value in the OTP memory.

A resistor-divider scales the rectified power-supply voltage,  $V_{CC}$ , to match the input range of the ADC. The ADC measures the scaled voltage and the value is sent to the host.

#### **Ordering Information**

PART	TEMP RANGE	PIN-PACKAGE
MAX78700+A00	-40°C to +85°C	10 µMAX
MAX78700+A00T	-40°C to +85°C	10 µMAX

+Denotes a lead(Pb)-free/RoHS-compliant package.

T = Tape and reel.

#### **Package Information**

For the latest package outline information and land patterns (footprints), go to <u>www.maximintegrated.com/packages</u>. Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.
