

#### **Product Features**

- Featuring *QiK Chip*<sup>™</sup> Technology
- Superior Jitter Performance (comparable to SAW based)
- APR of ±50 or ±100ppm over industrial temperature range
- Frequencies from 150 MHz to 1.4 GHz
- Designed for a short 2 week cycle time

#### **Product Description**

The M320x series of VCXO's is designed with a hermetically sealed high precision AT cut quartz crystal, combined with our QiK Chip<sup>™</sup> technology. This combination provides an industry setting 0.35 ps RMS jitter performance and excellent Phase Noise for your demanding circuit. The M310x is available in LVPECL, LVDS, or CML output and can be built to a variety of power requirements, 3.3, 2.5, and 1.8V. Tight thermal stability performance, broad frequency range, an industry standard 9x14mm package, and the ability to build and provide product in approximately 2 weeks, gives the designer a quick, solid foundation to build a solution with.

### **Product Applications**

- Telecommunications such as SONET / SDH / DWDM / FEC / SERDES / OC-3 thru OC-192
- Wireless base stations / WLAN / Gigabit Ethernet
- xDSL, Network Communications

- Avionic Flight Controls
- Military Communications
- Clock and Data Recovery
- Low Jitter Clock Generation

#### Handling Information

Although protection circuitry has been designed into the M320x oscillator, proper precautions should be taken to avoid exposure to electrostatic discharge (ESD) during handling and mounting. MtronPTI utilizes a human-body model (HBM) and a charged-device model (CDM) for ESD-susceptibility testing and protection design evaluation. ESD voltage thresholds are dependent on the circuit parameters used to define the mode. Although no industry-wide standard has been adopted for the CDM, a standard HBM (resistance = 1500  $\Omega$ , capacitance = 100 pF) is widely used and therefore can be used for comparison purposes. The HBM ESD threshold presented here was obtained using these circuit parameters.

Model	ESD Threshold, Minimum	Unit		
Human Body	1500*	V		
Charged Device	1500*	V		

\* MIL-STD-833D, Method 3015, Class 1

### **Quality Parameters**

Environmental Specifications/Qualification Testing Performed on the M320 VCXO								
Test	Test Method	Test Condition						
Electrical Characteristics	Internal Specification	Per Specification						
Frequency vs. Temperature	Internal Specification	Per Specification						
Mechanical Shock	MIL-STD-202, Method 213, C	100 g's						
Vibration	MIL-STD-202, Method 201-204	10 g's from 10-2000 Hz						
Thermal Cycle	MIL-STD-883, Method 1010, B	-55 Deg. C to +125 Deg. C, 15 minute Dwell, 10 cycles						
Aging	Internal Specification	168 Hours at 105 Degrees C						
Gross Leak	MIL-STD-202, Method 112	30 Second Immersion						
Fine Leak	MIL-STD-202, Method 112	Must meet 1x10 <sup>-8</sup>						
Solderability	MIL-STD-883, Method 2003	8 Hour Steam Age – Must Exhibit 95% coverage						
Resistance to Solvents	MIL-STD-883, Method 2015	Three 1 minute soaks						
Terminal Pull	MIL-STD-883, Method 2004, A	2 Pounds						
Lead Bend	MIL-STD-883, Method 2004, B1	1 Bending Cycle						
Physical Dimensions	MIL-STD-883, Method 2016	Per Specification						
Internal Visual	Internal Specification	Per Internal Specification
