

## **SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer**

**MAX2044**

### **General Description**

The MAX2044 single, high-linearity upconversion/downconversion mixer provides +32.5dBm input IP3, 8.5dB noise figure, and 7.7dB conversion loss for 2300MHz to 4000MHz LTE, WiMAX™, and MMDS wireless infrastructure applications. With an ultra-wide 2600MHz to 4300MHz LO frequency range, the MAX2044 can be used in either low-side or high-side LO injection architectures for virtually all 2.5GHz and 3.5GHz applications.

In addition to offering excellent linearity and noise performance, the MAX2044 also yields a high level of component integration. This device includes a double-balanced passive mixer core, an LO buffer, and on-chip baluns that allow for single-ended RF and LO inputs. The MAX2044 requires a nominal LO drive of 0dBm, and supply current is typically 138mA at V<sub>CC</sub> = 5.0V or 121mA at V<sub>CC</sub> = 3.3V.

The MAX2044 is pin similar with the MAX2029/MAX2031 650MHz to 1000MHz mixers and the MAX2039/MAX2041/MAX2042 1700MHz to 3000MHz mixers, making this entire family of up/downconverters ideal for applications where a common PCB layout is used for multiple frequency bands.

The MAX2044 is available in a compact 20-pin thin QFN (5mm x 5mm) package with an exposed pad. Electrical performance is guaranteed over the extended -40°C to +85°C temperature range.

### **Applications**

- 2.5GHz WiMAX and LTE Base Stations
- 2.7GHz MMDS Base Stations
- 3.5GHz WiMAX and LTE Base Stations
- Fixed Broadband Wireless Access
- Wireless Local Loop
- Private Mobile Radios
- Military Systems

### **Features**

- ◆ 2300MHz to 4000MHz RF Frequency Range
- ◆ 2600MHz to 4300MHz LO Frequency Range
- ◆ 50MHz to 500MHz IF Frequency Range
- ◆ 7.7dB Conversion Loss
- ◆ 8.5dB Noise Figure
- ◆ +32.5dBm Typical Input IP3
- ◆ 21dBm Typical Input 1dB Compression Point
- ◆ 68dBc Typical 2RF - 2LO Spurious Rejection at PRF = -10dBm
- ◆ Integrated LO Buffer
- ◆ Integrated RF and LO Baluns for Single-Ended Inputs
- ◆ Low -3dBm to +3dBm LO Drive
- ◆ Pin Similar with the MAX2029/MAX2031 Series of 650MHz to 1000MHz Mixers and the MAX2039/MAX2041/MAX2042 Series of 1700MHz to 3000MHz Mixers
- ◆ Single 5.0V or 3.3V Supply
- ◆ External Current-Setting Resistor Provides Option for Operating Device in Reduced-Power/Reduced-Performance Mode

### **Ordering Information**

PART	TEMP RANGE	PIN-PACKAGE
MAX2044ETP+	-40°C to +85°C	20 Thin QFN-EP*
MAX2044ETP+T	-40°C to +85°C	20 Thin QFN-EP*

+Denotes a lead(Pb)-free/RoHS-compliant package.

\*EP = Exposed pad.

T = Tape and reel.

WiMAX is a trademark of WiMAX Forum.

# **SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer**

## **ABSOLUTE MAXIMUM RATINGS**

V <sub>CC</sub> to GND.....	-0.3V to +5.5V
IF+, IF-, LOBIAS to GND.....	-0.3V to (V <sub>CC</sub> + 0.3V)
RF, LO Input Power.....	+20dBm
RF, LO Current (RF and LO is DC shorted to GND through a balun).....	50mA
Continuous Power Dissipation (Note 1).....	5W
θ <sub>JA</sub> (Notes 2, 3).....	+38°C/W

θ <sub>JC</sub> (Notes 1, 3).....	+13°C/W
Operating Case Temperature Range (Note 4) .....	T <sub>C</sub> = -40°C to +85°C
Junction Temperature .....	+150°C
Storage Temperature Range.....	-65°C to +150°C
Lead Temperature (soldering, 10s) .....	+300°C

**Note 1:** Based on junction temperature  $T_J = T_C + (\theta_{JC} \times V_{CC} \times I_{CC})$ . This formula can be used when the temperature of the exposed pad is known while the device is soldered down to a PCB. See the *Applications Information* section for details. The junction temperature must not exceed +150°C.

**Note 2:** Junction temperature  $T_J = T_A + (\theta_{JA} \times V_{CC} \times I_{CC})$ . This formula can be used when the ambient temperature of the PCB is known. The junction temperature must not exceed +150°C.

**Note 3:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maxim-ic.com/thermal-tutorial](http://www.maxim-ic.com/thermal-tutorial).

**Note 4:** T<sub>C</sub> is the temperature on the exposed pad of the package. T<sub>A</sub> is the ambient temperature of the device and PCB.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## **5.0V SUPPLY DC ELECTRICAL CHARACTERISTICS**

(Typical Application Circuit, V<sub>CC</sub> = 4.75V to 5.25V, no input RF or LO signals. T<sub>C</sub> = -40°C to +85°C, unless otherwise noted. Typical values are at V<sub>CC</sub> = 5.0V, T<sub>C</sub> = +25°C, all parameters are production tested.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Voltage	V <sub>CC</sub>		4.75	5.0	5.25	V
Supply Current	I <sub>CC</sub>		138	155		mA

## **3.3V SUPPLY DC ELECTRICAL CHARACTERISTICS**

(Typical Application Circuit, V<sub>CC</sub> = 3.0V to 3.6V, no input RF or LO signals. T<sub>C</sub> = -40°C to +85°C, unless otherwise noted. Typical values are at V<sub>CC</sub> = 3.3V, T<sub>C</sub> = +25°C, parameters are guaranteed by design, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Voltage	V <sub>CC</sub>		3.0	3.3	3.6	V
Supply Current	I <sub>CC</sub>	Total supply current, V <sub>CC</sub> = 3.3V	121	135		mA

## **RECOMMENDED AC OPERATING CONDITIONS**

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
RF Frequency Range	f <sub>RF</sub>	Typical Application Circuit with C <sub>1</sub> = 3.3nH and C <sub>12</sub> = 0.3pF, see Table 1 for details (Note 5)	2300	3000		MHz
		Typical Application Circuit with C <sub>1</sub> = 8.2pF and C <sub>12</sub> not installed, see Table 1 for details (Note 5)	3000	4000		
LO Frequency	f <sub>LO</sub>	(Note 5)	2600	4300		MHz
IF Frequency	f <sub>IF</sub>	Using an M/A-Com MABAES0029 1:1 transformer as defined in the <i>Typical Application Circuit</i> , IF matching components affect the IF frequency range (Note 5)	50	500		MHz
LO Drive	P <sub>LO</sub>	(Note 5)	-3	0	+3	dBm

# **SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer**

## **5.0V SUPPLY AC ELECTRICAL CHARACTERISTICS (DOWNCONVERTER MODE, $f_{RF} = 3100\text{MHz to } 3900\text{MHz}$ , LOW-SIDE LO INJECTION)**

(*Typical Application Circuit* with tuning elements outlined in **Table 1**,  $V_{CC} = 4.75\text{V to } 5.25\text{V}$ , RF and LO ports are driven from  $50\Omega$  sources,  $P_{LO} = -3\text{dBm to } +3\text{dBm}$ ,  $P_{RF} = 0\text{dBm}$ ,  $f_{RF} = 3100\text{MHz to } 3900\text{MHz}$ ,  $f_{LO} = 2800\text{MHz to } 3600\text{MHz}$ ,  $f_{IF} = 300\text{MHz}$ ,  $f_{RF} > f_{LO}$ ,  $T_C = -40^\circ\text{C to } +85^\circ\text{C}$ . Typical values are at  $V_{CC} = 5.0\text{V}$ ,  $P_{RF} = 0\text{dBm}$ ,  $P_{LO} = 0\text{dBm}$ ,  $f_{RF} = 3500\text{MHz}$ ,  $f_{LO} = 3200\text{MHz}$ ,  $f_{IF} = 300\text{MHz}$ ,  $T_C = +25^\circ\text{C}$ . All parameters are guaranteed by design, unless otherwise noted.) (Note 6)

## **Pin Configuration/Functional Diagram**

## **Pin Description**

PIN	NAME	FUNCTION
1, 6, 8, 14	VCC	Power Supply. Bypass to GND with 0.01µF capacitors as close as possible to the pin.
2	RF	Single-Ended 50Ω RF Input/Output. Internally matched and DC shorted to GND through a balun. Provide an input DC-blocking capacitor if required.
3, 9, 13, 15	GND	Ground. Not internally connected. Pins can be grounded.
4, 5, 10, 12, 17	GND	Ground. Internally connected to the exposed pad (EP). Connect all ground pins and the exposed pad together.
7	LOBIAS	LO Output Bias Resistor for LO Buffer. Connect a 698Ω 1% resistor (138mA bias condition) from LOBIAS to ground.
11	LO	Local Oscillator Input. This input is internally matched to 50Ω. Requires an input DC-blocking capacitor.
16, 20	GND	Ground. Connect pins to ground.
18, 19	IF-, IF+	Mixer Differential IF Output/Input. Provide DC-blocking capacitors if required. These ports are internally biased to VCC/2.
—	EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance.

# SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer

## Detailed Description

The MAX2044 is a high-linearity passive mixer targeting 2.5GHz and 3.5GHz wireless infrastructure applications. With an ultra-wide 2600MHz to 4300MHz LO frequency range, the MAX2044 can be used in either low-side or high-side LO injection architectures for virtually all WiMAX, LTE, and MMDS receive and transmit applications.

When used as a low-side LO injection downconverting mixer in the 3000MHz to 4000MHz band, the MAX2044 provides +32.5dBm of input IP3, with typical conversion loss and noise figure values of only 7.7dB and 8.5dB, respectively. The integrated baluns and matching circuitry allow for  $50\Omega$  single-ended interfaces to the RF and the LO port. The integrated LO buffer provides a high drive level to the mixer core, reducing the LO drive required at the MAX2044's input to a -3dBm to +3dBm range. The IF port incorporates a differential output, which is ideal for providing enhanced 2RF - 2LO or 2LO - 2RF performance.

Specifications are guaranteed over broad frequency ranges to allow for use in WiMAX, LTE, and MMDS base stations. The MAX2044 is specified to operate over a 2300MHz to 4000MHz RF input range, a 2600MHz to 4300MHz LO range, and a 50MHz to 500MHz IF range. Operation beyond these ranges is possible (see the *Typical Operating Characteristics* for additional information).

### RF Input and Balun

The MAX2044 RF input provides a  $50\Omega$  match when combined with a series DC-blocking capacitor. This DC-blocking capacitor is required as the input is internally DC shorted to ground through the on-chip balun. When using an 8.2pF DC-blocking capacitor, the RF port input return loss is typically better than 13dB over the 3300MHz to 3900MHz RF frequency range. A return loss of 15dB over the 2400MHz to 2700MHz range is achievable by changing the input matching components per Tables 1 and 2. Other combinations of C1 and C12 can be used to optimize RF return loss in the 2300MHz to 4000MHz band.

### LO Inputs, Buffer, and Balun

With a broadband LO drive circuit spanning 2600MHz to 4300MHz, the MAX2044 can be used in either low-side or high-side LO injection architectures for virtually all 2.5GHz and 3.5GHz applications. The LO input is internally matched to  $50\Omega$ , requiring only a 2pF DC-blocking

capacitor. A two-stage internal LO buffer allows for a -3dBm to +3dBm LO input power range. The on-chip low-loss balun, along with an LO buffer, drives the double-balanced mixer. All interfacing and matching components from the LO inputs to the IF outputs are integrated on-chip.

### High-Linearity Mixer

The core of the MAX2044 is a double-balanced, high-performance passive mixer. Exceptional linearity is provided by the large LO swing from the on-chip LO buffer. IIP3, 2RF - 2LO rejection, and noise figure performance are typically +32.5dBm, 68dBc, and 8.5dB, respectively.

### Differential IF Output

The MAX2044 has a 50MHz to 500MHz IF frequency range, where the low-end frequency depends on the frequency response of the external IF components.

The MAX2044's differential ports are ideal for providing enhanced 2RF - 2LO and 2LO - 2RF performance. Single-ended IF applications require a 1:1 (impedance ratio) balun to transform the  $50\Omega$  differential IF impedance to a  $50\Omega$  single-ended system. An MABAES0029 1:1 transformer is used to characterize the part and its loss is included in the data presented in this data sheet. The user can connect a differential IF amplifier or SAW filter to the mixer IF port, but a DC block is required on both IF+/IF- ports to keep external DC from entering the IF ports of the mixer. Capacitors C4 and C7 are required DC blocks since the IF+ and IF- terminals are internally biased to VCC/2.

## Applications Information

### Input and Output Matching

The RF input provides a  $50\Omega$  match when combined with a series DC-blocking capacitor. Use an 8.2pF capacitor value for RF frequencies ranging from 3000MHz to 4000MHz. See Tables 1 and 2 for alternative components that provide an excellent match over the 2300MHz to 3000MHz band. The LO input is internally matched to  $50\Omega$ ; use a 2pF DC-blocking capacitor to cover operations spanning the 2600MHz to 4300MHz range. The IF output impedance is  $50\Omega$  (differential). For evaluation, an external low-loss 1:1 (impedance ratio) balun transforms this impedance down to a  $50\Omega$  single-ended output (see the *Typical Application Circuit*).

# SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer

## Reduced-Power Mode

The MAX2044 has one pin (LOBIAS) that allows an external resistor to set the internal bias current. Nominal values for this resistor are shown in Tables 1 and 2. Larger value resistors can be used to reduce power dissipation at the expense of some performance loss. If  $\pm 1\%$  resistors are not readily available, substitute with  $\pm 5\%$  resistors.

Significant reductions in power consumption can also be realized by operating the mixer at a supply voltage of 3.3V. Doing so reduces the overall power consumption by typically 42%. See the 3.3V Supply AC Electrical Characteristics table and the relevant 3.3V curves in the Typical Operating Characteristics section to evaluate the power vs. performance trade-offs.

## Layout Considerations

A properly designed PCB is an essential part of any RF/microwave circuit. Keep RF signal lines as short as possible to reduce losses, radiation, and inductance. The load impedance presented to the mixer must be such that any capacitance from both IF- and IF+ to ground does not exceed several picofarads. For the best performance, route the ground pin traces directly to the exposed pad under the package. The PCB exposed pad **MUST** be connected to the ground plane of the PCB. It is suggested that multiple vias be used to connect this pad to the lower level ground planes. This method provides a good RF/thermal-conduction path for the device. Solder the exposed pad on the bottom of the device package to the PCB.

## Power-Supply Bypassing

Proper voltage supply bypassing is essential for high-frequency circuit stability. Bypass each VCC pin with the capacitors shown in the *Typical Application Circuit* and see Table 1.

C4, C7	2	470pF microwave capacitors (0402)	Murata Electronics North America, Inc.
C5	0	Not installed, microwave capacitor (0402)	—
C10	1	2pF microwave capacitor (0402)	Murata Electronics North America, Inc.
C12	1	0.3pF microwave capacitor (0402). Use for RF frequencies ranging from <b>2300MHz to 3000MHz</b> .	Murata Electronics North America, Inc.
	0	Microwave capacitor (0402) not installed for RF frequencies ranging from <b>3000MHz to 4000MHz</b> .	—
R1	1	698 $\Omega \pm 1\%$ resistor (0402). Use for <b>V<sub>CC</sub> = +5.0V</b> applications.	Digi-Key Corp.
		698 $\Omega \pm 1\%$ resistor (0402). Use for <b>V<sub>CC</sub> = +3.3V</b> applications.	Digi-Key Corp.
T1	1	1:1 IF balun MABAES0029	M/A-Com
U1	1	MAX2044 IC (20 TQFN)	Maxim Integrated Products, Inc.

# SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer

## Exposed Pad RF/Thermal Considerations

The exposed pad (EP) of the MAX2044's 20-pin thin QFN package provides a low thermal-resistance path to the die. It is important that the PCB on which the MAX2044 is mounted be designed to conduct heat from

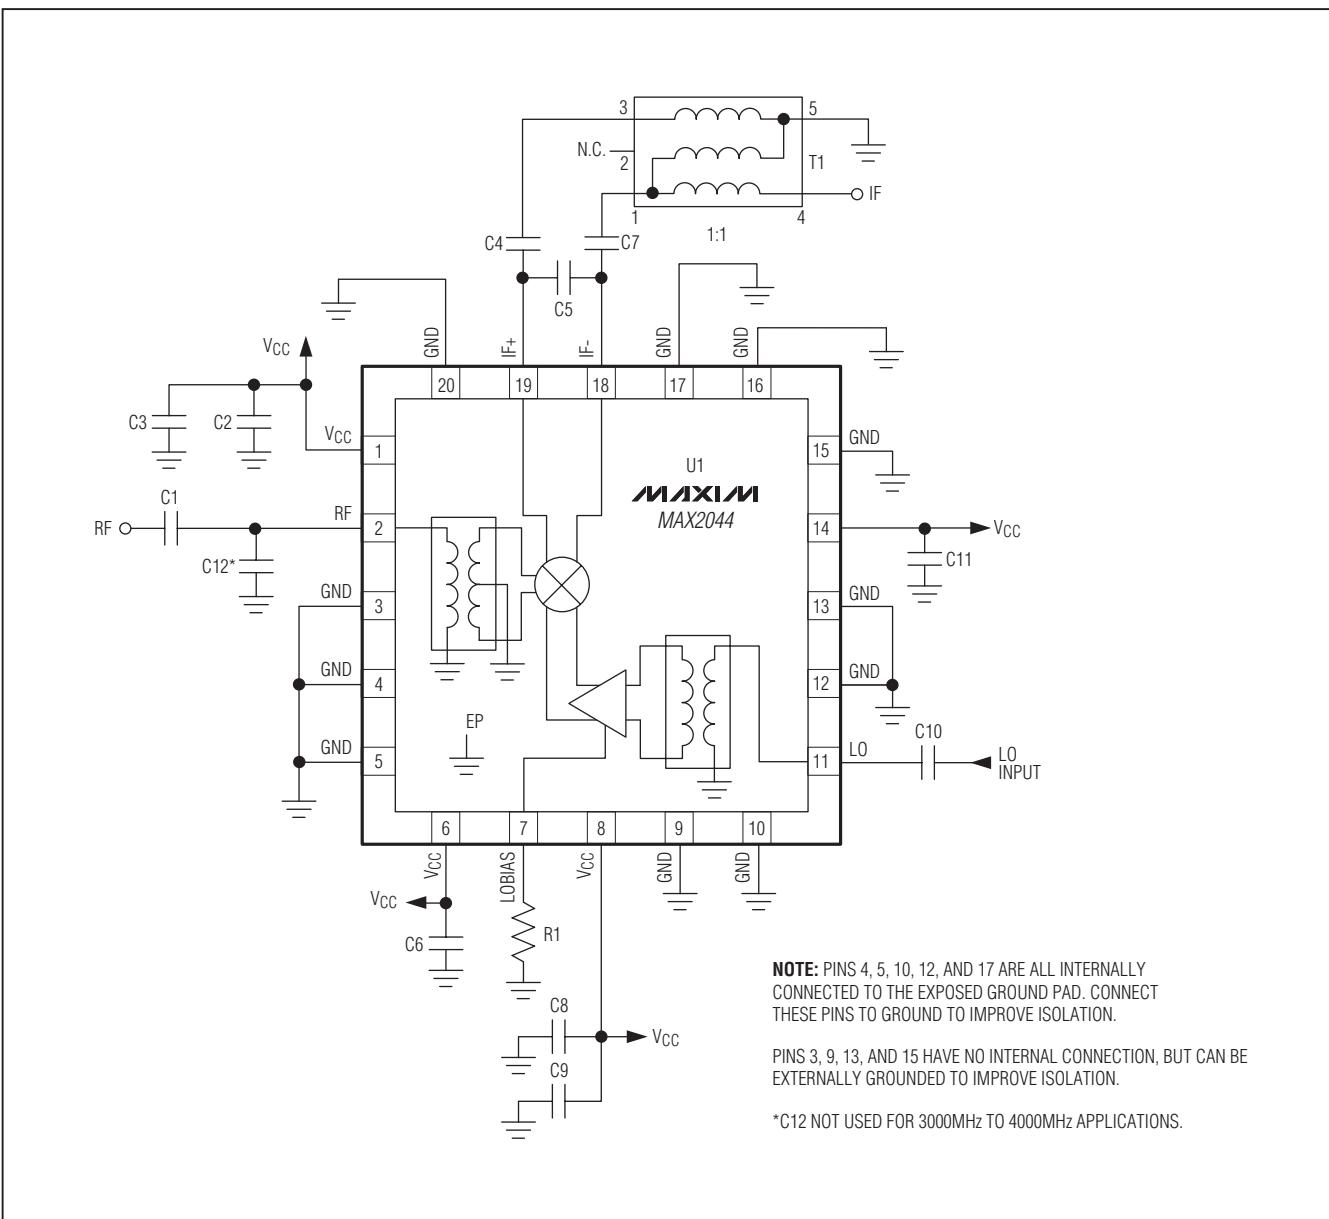

the EP. In addition, provide the EP with a low-inductance path to electrical ground. The EP **MUST** be soldered to a ground plane on the PCB, either directly or through an array of plated via holes.

**Table 2. Upconverter Mode Component Values**

DESIGNATION	QTY	DESCRIPTION	COMPONENT SUPPLIER
C1	1	3.3nH microwave inductor (0402). Use for RF frequencies ranging from <b>2300MHz to 3000MHz</b> .	Coilcraft, Inc.
		8.2pF microwave capacitor (0402). Use for RF frequencies ranging from <b>3000MHz to 4000MHz</b> .	Murata Electronics North America, Inc.
C2, C6, C8, C11	4	0.01μF microwave capacitors (0402)	Murata Electronics North America, Inc.
C3, C9	0	Not installed, microwave capacitors (0402)	—
C4, C7	2	470pF microwave capacitors (0402)	Murata Electronics North America, Inc.
C5	0	Not installed, microwave capacitor (0402)	—
C10	1	2pF microwave capacitor (0402)	Murata Electronics North America, Inc.
C12	1	0.3pF microwave capacitor (0402). Use for RF frequencies ranging from <b>2300MHz to 3000MHz</b> .	Murata Electronics North America, Inc.
		Microwave capacitor (0402) not installed for RF frequencies ranging from <b>3000MHz to 4000MHz</b> .	—
R1	1	698Ω ±1% resistor (0402). Use for <b>V<sub>CC</sub> = +5.0V</b> applications.	Digi-Key Corp.
		698Ω ±1% resistor (0402). Use for <b>V<sub>CC</sub> = +3.3V</b> applications.	Digi-Key Corp.
T1	1	1:1 IF balun MABAES0029	M/A-Com
U1	1	MAX2044 IC (20 TQFN)	Maxim Integrated Products, Inc.

# SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer

## Typical Application Circuit

# **SiGe, High-Linearity, 2300MHz to 4000MHz Upconversion/Downconversion Mixer with LO Buffer**

**MAX2044**

## **Chip Information**

PROCESS: SiGe BiCMOS

## **Package Information**

For the latest package outline information and land patterns, go to [www.maxim-ic.com/packages](http://www.maxim-ic.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	DOCUMENT NO.
20 TQFN-EP	T2055+3	<a href="#">21-0140</a>
