

TFT BOARD 7 RESISTIVE

TFT Board 7 Resistive is a 7" display board which features the standardized 2x20-pin display connector. The display board also integrates a resistive touch panel. The TFT display module supports up to 24-bit pixel format (RGB: 888) and resolution of 800 x 480 pixels. It features an excellent contrast ratio and uniform brightness. TFT Board 7 Resistive, along with other displays from the TFT Board Resistive line of products, is supported by [VisualTFT](#), a software tool for simplified development of visually oriented embedded applications.
