# **16mm XA E-Stops**

### **Key features:**

- Two button sizes: ø29 and ø40mm
- Lead-free, RoHS compliant, (EU directive 2002/95/EC)
- Depth behind the panel: Standard - only 27.9mm for 1 to 4 contacts Unibody - only 23.9mm for 1NC or 2NC
- IDEC's original "Safe break action" ensures that the NC contacts open when the contact block is detached from the operator.
- Push-to-lock, Pull or Turn-to-reset operator
- Direct opening action mechanism (IEC60947-5-5, 5.2, IEC60947-5-1, Annex K)
- Safety lock mechanism (IEC60947-5-5, 6.2)
- Degree of protection: Standard - IP65 (IEC60529) Unibody - IP65 and IP40 (IEC 60529)
- UL, c-UL recognized. EN compliant
- UL NISD2 category emergency stop button (File# E305148)

Contactors

# **Operating Instructions**

### **Removing the Contact Block**

First unlock the operator button. While pushing up the white bayonet ring, using a small screwdriver (width: 2.5 to 3 mm) if necessary, turn the contact block counterclockwise and pull out. Do not exert excessive force when using a screwdriver, otherwise the bayonet ring may be damaged.

### Notes for Removing the Contact Block

- 1. When the contact block is removed, the monitor contact (NO contact) is closed.
- 2. While removing the contact block, do not exert excessive force, otherwise the switch may be damaged.

### **Panel Mounting**

Remove the locking ring from the operator and check that the rubber gasket is in place. Insert the operator from panel front into the panel hole. Face the side with the anti-rotation tab on the operator upward, and tighten the locking ring.

### **Notes for Panel Mounting**

To mount XA emergency stop switches onto a panel, tighten the locking ring to a tightening torque of 0.88 N·m maximum using ring wrench MT-001. Do not use pliers. Do not exert excessive force, otherwise the locking ring may be damaged.

### **Installing the Contact Block**

First turn the bayonet ring to the unlocked position.

Align the small **A** marking on the edge of the operator base with the TOP marking on the contact block. Press the contact block onto the operator and turn the contact block clockwise until the bayonet ring clicks.

### **Notes for Installing the Contact Block**

Check that the contact block is securely installed on the operator. When the emergency stop switch is properly assembled, the bayonet ring is in place as shown below.

### **Removing the LED Unit**

Pull out the LED unit while squeezing the latches on the LED unit using the LED unit removal tool (MT-101).

### **Installing the LED Unit**

Align the top of the LED unit with the TOP marking on the contact block. Push the LED unit into the contact block.

Signaling Lights

Terminal Blocks

# **Operating Instructions, continued**

### Wiring

- 1. The applicable wire size is 16 AWG maximum.
- 2. Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu solder is recommended. When soldering, do not touch the switch with the soldering iron. Also ensure that no tensile force is applied to the terminals. Do not bend the terminals or apply excessive force to the terminals.
- 3. Use a non-corrosive rosin flux.
- 4. Because the terminal spacing is narrow, use protective tubes or heat shrinkable tubes to avoid burning of wire coating or short circuit.

### **PC Board Terminal Type**

- 1. When mounting a contact block on a PC board, provide sufficient rotating space for the PC board when installing and removing the contact block.
- 2. When mounting an XA emergency stop switch on a PC board, make sure that the operator is securely installed.

### **About PC Board and Circuit Design**

- 1. Use PC boards made of glass epoxy copper-clad laminated sheets of 1.6 mm in thickness, with double-sided through holes.
- 2. PC boards and circuits must withstand rated voltage and current, including instantaneous current and voltage at switching.
- 3. The minimum applicable load is 5V AC/DC, 1 mA.
- 4. Within the 2.8\* mm areas shown in the figure below, terminals touch the PC board, resulting in possible short circuit on the printed circuit. When designing a PC board pattern, take this possibility into consideration.

All dimensions in mm

### **Installing Insulation Terminal Cover**

To install the terminal cover (XA9Z-VL2), align the TOP marking on the terminal cover with TOP marking on the contact block, and press the terminal cover toward the contact block.

Note: For wiring, insert the wires into the holes in the terminal cover before soldering.

### **Contact Bounce**

When the button is reset by pulling or turning, the NC main contacts will bounce. When pressing the button, the NO monitor contacts will bounce.

When designing a control circuit, take the contact bounce time into consideration (reference value: 20 ms).

### Nameplate

When anti-rotation is not required, remove the projection from the nameplate using pliers.

### Handling

Do not expose the switch to excessive shock and vibration, otherwise the switch may be deformed or damaged, causing malfunction or operation failure.

- Turn off power to the XA series emergency stop switch before starting installation, removal, wiring, maintenance, and inspection of the relays. Failure to turn power off may cause electrical shock or fire hazard.
- · Use the LED unit removal tool when replacing the LED unit to avoid burning your hands.
- · Use wires of the proper size to meet the voltage and current requirements, and solder the wires correctly. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
