Industry leading circuit protection solutions to safeguard data interfaces from ESD and surge transients

TVS SOLUTIONS

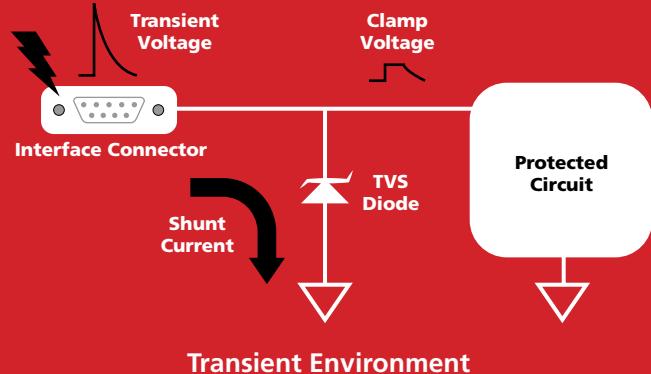

For more than 25 years, Semtech's Protection Products Group has been on the forefront of developing cutting-edge circuit protection solutions to safeguard the various circuit buses, ports, connectors, and interfaces found in consumer products and electronic systems. Semtech's proprietary Transient Voltage Suppression (TVS) technologies lead the industry

in protecting high-speed data circuits against electrostatic discharge (ESD), electromagnetic interference, cable discharge, lightning, and power surges. These innovative devices help ensure electronics do not fail in the presence of highly destructive overvoltage threats.

What is ESD?

Electrostatic discharge (ESD) is a natural phenomenon that occurs all around us. ESD events occur when electrons - due to friction or induction - are redistributed on a material surface in such a way to create a charge imbalance and thus an electric field. When an electric field is sufficiently strong, the static charges seek equilibrium across the potential difference, and a violent electrical zap known as an electrostatic discharge can occur. These common electrical shocks occur with such frequency that most of the time they may not even be perceptible to humans, but they can mean disaster for microelectronic-based electronics. An ESD strike and resulting failure to the electronic product may lead to lost time to market, revenue and a loss of reputation in the market for a product supplier.

THE NEED FOR ROBUST ESD PROTECTION

The world is more connected than ever. From smartphones to tablets to smart vehicles – these devices give us constant access to real-time information and live communication. As our world becomes more connected, microelectronic chips are also becoming faster and more advanced. As this trend continues, the chips enabling these smaller, thinner and faster microelectronics must likewise scale to smaller geometries. As a result, these devices exhibit an increased sensitivity to real world ESD and transient voltage threats.

Increased device vulnerability to ESD threats, coupled with the trend in chip miniaturization, has compounded the challenge of designing adequate circuit-level ESD protection. With the increased ESD sensitivity of digital ICs, the need to protect systems with more robust off-chip/system-level TVS is more critical today than ever.

TVS APPLICATION MATRIX

Semtech's protection products meet the industry's most rigid immunity standards, including:

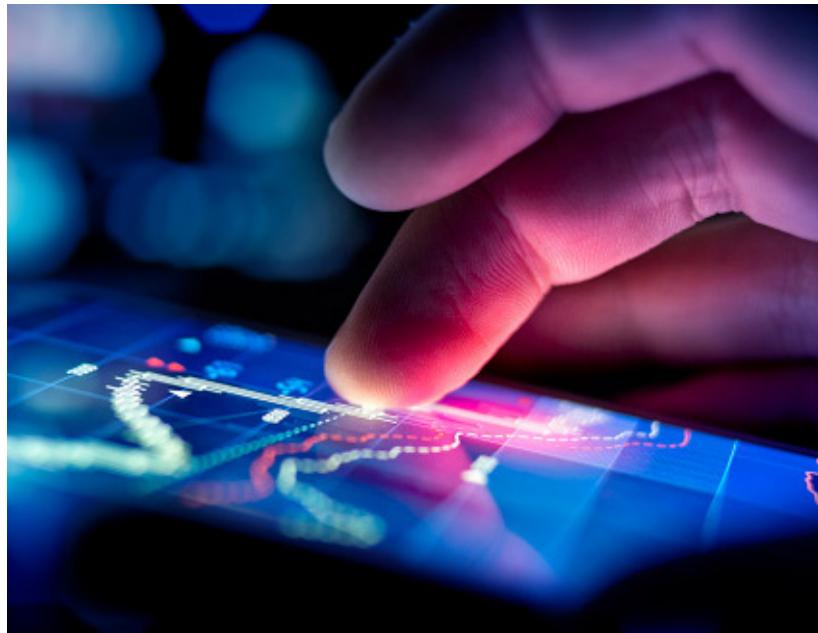

- IEC 61000-4-2 (ESD)
- IEC 61000-4-4 (EFT)
- IEC 61000-4-5 (lightning)
- Telcordia GR-1089
- ITU K.20, K.21

FEATURES

- Sub-5V solutions: 2.5V – 3.3V
- Ultra-low capacitance devices: <0.5pF
- Extremely low clamping voltage
- ESD protection with EMI/RFI filtering
- Single-line and multi-line protection
- Small package solutions, including Semtech's own leadless package
- High volume manufacturing
- RoHS/WEEE Compliant

APPLICATIONS

- Portable electronics
- Ethernet
- Set top box
- HDTV/monitor interfaces
- Telecom/datacom interfaces
- Servers/desktop
- Notebooks/tablets
- Automotive interfaces (AEC-Q100 qualified)
- Wearables
- IoT nodes

TVS SOLUTIONS

Semtech has a rich and diverse portfolio of TVS protection devices. It is helpful to think of these devices as categorized into five basic subgroups:

µClamp® Family (MicroClamp)

- General purpose ESD protection
- Single-line and multi-line devices
- Used in broad markets, but more commonly in portable and handheld applications

RClamp® Family (RailClamp)

- Low capacitance ESD and transient voltage protection
- Protection for high-speed lines
- Surge and ESD level protection
- Multi-market adoption: used in high-speed data lines (differential pairs) and some RF applications

PClamp® Family (PowerClamp)

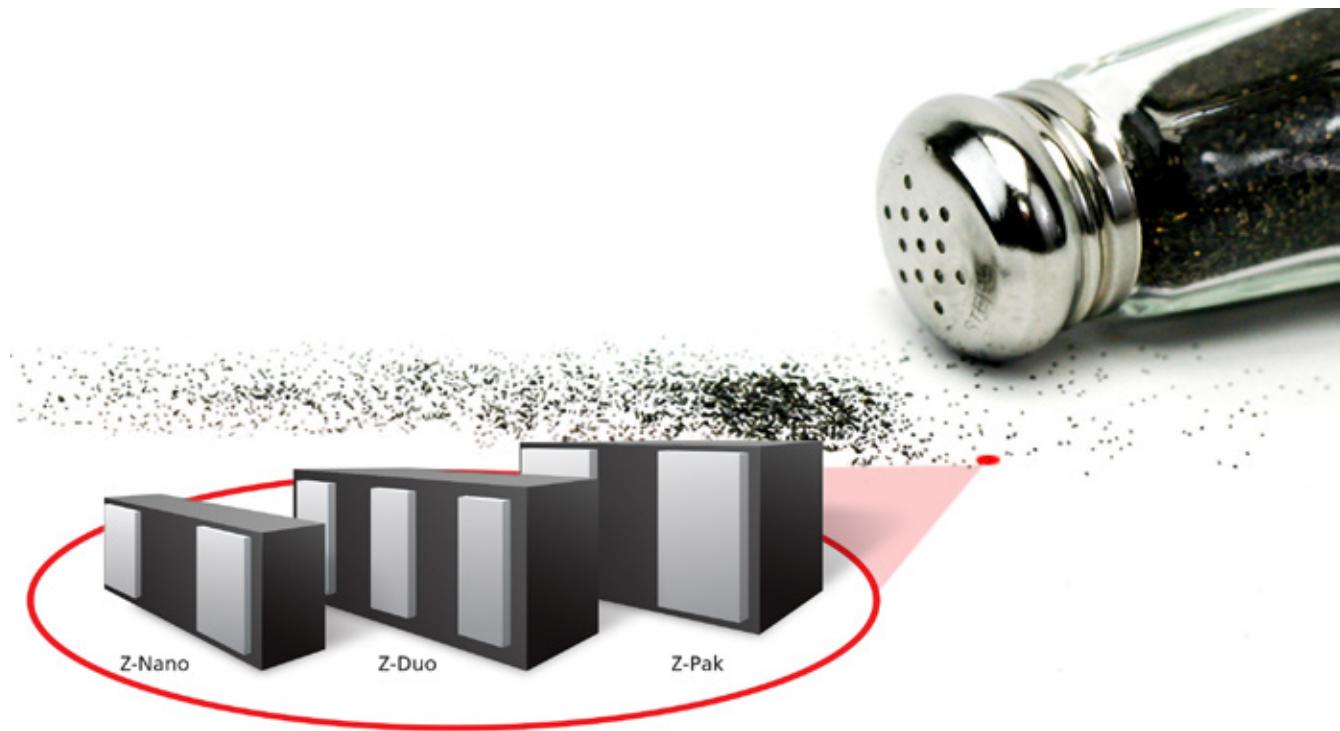

- Higher surge immunity for Vbus and DC lines
- High-surge protection (>100A 8x20µs surge events)
- Generally intended for Vbus and DC line applications

TClamp® Family (TransClamp)

- High-surge, low capacitance protection
- Single-line and multi-line devices
- Targeted at telecom and some industrial applications

EClamp® Family (EMI Clamp)

- ESD protection in combination with filter devices
- TVS with integrated passive components, used for EMI filtering applications
- EClamp family also features TVS and termination passives for data interfaces

SEMTECH CORPORATION

Semtech Corporation is a leading supplier of high performance analog, mixed-signal semiconductors and advanced algorithms for high-end consumer, enterprise computing, communications, and industrial equipment. Semtech, publicly traded since 1967, is listed on the Global Select Market under the symbol SMTC and has more than 32 sales and application support offices in 15 countries as well as representatives and distribution support locations in more than 30 countries.

Semtech is dedicated to providing proprietary platforms, differentiated by innovation, size, efficiency, performance, and reach. Our solutions are used in some of the most innovative systems and products in the fastest growing markets today.

These markets include smartphones, LCD TVs, notebooks, tablets, smart grid, automotive, automatic meter reading, medical, wireless infrastructure, PON, Internet of Things, optical transport, and datacenters. More than 5,000 customers worldwide rely on our diverse product portfolio and world class technology roadmap for solutions in low-power wireless communications, optical data transport, video broadcasting, power management, circuit protection, touch sensing, and more, making Semtech one of the most balanced semiconductor companies in the industry.
